

Miguel Francisco González Pujazón – 2º DAW

The history of hacking (From 2000's):

2004 – A group of students from the North Korean military academy “Electronic warriors” successfully cracked South Korean computer systems.

2008 – Anonymous, a decentralized hacktivist collective originated on the imageboard 4chan, starts a wave of DDOS attacks against the Church of Scientology websites.

2010 – Wikileaks, a non-profit organization created by Julian Assange, released 92.000 documents related to the Afghan War and 391.832 related to Iraq War.

2011 – 77 million accounts from PlayStation Network were compromised by an external intrusion, forcing Sony to turn off the service for 23 days

2017 – Telefónica suffered the randomware attack known as WannaCry. Chema Alonso and his team were able to build a tool to recover the files cyphered in the attack.
